1935 HUDSON Eight
Series 54 (HT), 55 (HU), 56 (HHU)

MODEL IDENTIFICATION

ENGINE NUMBER: - First number, 55,000. Stamped on left side of cylinder block opposite #8 cylinder.

TUNE-UP

COMPRESSION: - Ratio - 6.0-1 (Std. cast-iron head).
7.0-1 (Optl. aluminum-iron composite head.)
Pressure: - 110 lbs. at 150 R.P.M. (6.0-1 head), 128 lbs. at 150 R.P.M. (7.0-1 head) with all spark plugs removed and throttle wide open.

VACUUM READING: - Gauge should show steady reading of 18-20", with engine idling at 350 R.P.M.

FIRING ORDER: - 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUGS: - Champion Type J-7S. 14 mm. Metric.
Gap: - .022"

IGNITION: - See Coil, Condenser, and Distributor.
Breaker Gap: - .017" Cam Angle 27.5° (closed).
Automatic Advance: - 17½° max. at 2000 RPM (IGP-4001-A), 1700 RPM IGP-4001-B). Distributor degrees & RPM.

IGNITION TIMING: See IGNITION TIMING.

Idle Setting: - Idle screw 1/2-1 turn open. Idle speed 350 RPM or 7 MPH.

Float Level: - 3/8" from gasket seat on cover to nearest point on float (top at free end).
Accelerating Pump: - Center hole Normal. Inner hole (Summer), Outer hole (Winter) for temperature extremes.
Fuel Pump Pressure: - 3½ lbs. maximum.

VALVES: See Valve Timing.
Tappet Clearance: - .006" Intake, .008" Exhaust - Hot.

STARTING: See Battery, Starter, Generator, Regulator.

IGNITION

Ignition Switch: - Mitchellock Model 24-B, Type 6509. Connected to coil by armored cable.
Ignition Current: - 2.5 amperes idling, 4.5 stopped.

Breaker Gap: - Set at .017".
Breaker Arm Spring Tension: - 18 ozs. Min, 20 ozs. Max

| 15 | 1475 | 30 | 2950 |
| 17.5 | 1700 | 35 | 3400 |

Removal: - Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

IGNITION TIMING

IGNITION TIMING: - Flywheel Deg. Piston Pos.
First 10246 cars - 4½° or ½” BTDC .0089° BTDC.
Eng. No. 65247 up - At TDC .0000° TDC.

Timing (Initial Setting) – With #1 piston on compression, turn engine over until piston reaches top dead center, stop when flywheel mark UDC.1-8° lines up with pointer in Inspection hole in left front face of housing.

CARBURETOR: - Carter, Model 310-S, 1¼" downdraft type with drop-bar Fast Idle.

Automatic Choke – Carter Climatic Control
1935 Hudson 8 (Carburetor – cont’d)

**CARBURETOR EQUIPMENT**

**Fuel Pump:** - A.C., Type R-1521540 diaphragm type.
**Gasoline Gauge:** - King-Seeley Electric., K-S #5200 (dash unit), #5582 (tank unit).

**BATTERY**

**BATTERY:** - Exide, Type XTL-19-17-F. 6 volt, 19 plate, 108 A.H. capacity (20 hour rate).
**Starting Capacity** - 130 amperes for 20 minutes.
**Grounded Terminal** - Positive (+) terminal.
**Location** - On left hand side under front floor.

**STARTER**

Auto-Lite Model MAB-4061 (first cars), MAB-4075
Eng. No. 68336 Up). Armature No. MAB-2113
**Drive** - Inboard Bendix (barrel), Type A-1673.
**Rotation** - Counter-clockwise at commutator end bolts.

**Cranking Engine** - 150 R.P.M., 125 amps., 5 volts.
**Brush Spring Tension** - 44-56 ozs. (new brushes).

Lock torque figures correct without switch.

**Starting Switch:** - Type SS-4001. Solenoid type switch mounted on starter field frame controlled by pushbutton Switch.

**Removal:** - Starter flange mounted on left front face of Flywheel housing. To remove, take out flange mounting
GENERATOR

Charging Rate Adjustment - Use test meters to check generator output. Short out current regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator cover band, shift third brush by hand, counterclockwise to increase, or clockwise to decrease charging rate. Remove jumper wire.

Maximum Charging Rate - 22 amperes (cold or 18 amperes (hot), 8.0 volts, 2400 R.P.M., 28 M.P.H.

</table>

Rotation - Counter-clockwise at commutator end.
Motoring - 4.56-5.04 amperes at 6.0 volts.
Field Current - 3.94-4.36 amperes at 6.0 volts.
Field Fuse - 5 ampare In knurled cup on side of regulator case.
Removal: - Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts, one clamp bolt.
Belt Adjustment - Loosen pivot bolts and clamp bolt, pull generator out from engine until slack on belt midway between fan and generator pulleys is 1½ (measure from straightedge across pulleys), tighten mounting bolts.

REGULATOR
Auto-Lite Model TC-4304-A. Consists of Cutout Relay and Current Regulator (Two-rate relay) in a single case on the dash. Cutout relay has extra set of ground contacts for generator charging tell-tale signal light control.

Cutout Relay
Cuts In - 6.5-7.25 volts.
Cuts Out - .5-2.5 ampere discharge current.
Relay Contact Gap - .015-.045" (with upper or front ground contacts closed-ground contacts must be open with main contacts closed).
Air Gap - .010-.030" with contacts closed.

Current Regulator
Contacts Open - 8.0-8.50 volts at 700 F.
Contacts Close - 1.2-1.4 volts below opening point.

Contact Gap - .005" minimum.
Air Gap - .045' with contacts closed.

LIGHTING
SIGNAL LIGHTS:- Battery Charge Tell-tale and Oil Pressure Tell-tale lights mounted on instrument panel.
Horns: - Auto-Lite Type HA-4003,, 4004 (Std), Klaxon (Std. on HT, HU). Klaxon Model K-33-M, Type 1901 high note), 1902 low note, (Optl. On HT, HU, Std. on HHU). Klaxon horns are matched tone, twin horns operated by horn relay.
Horn Relay: - Model 268-T. Current draw .8 amps
Contact Gap - .015-.025"
Air Gap - .012-.017 with contacts closed
Fuses: - Lighting - Two 20 ampere capacity on switch.
Generator Field - 5 ampere in regulator.

ENGINE
Model Ratio Horsepower 150 RPM
HT, HU, HHU 6.0-1 113@3800 110 lbs
HT, HU, HHU 7.0-1 124@4000 128 lbs.
NOTE: 6.25-1 AND 7.0-1 heads are aluminum composite. High octane fuel must be used with these heads.
Vacuum Reading - Gauge should show steady reading of 18-20", with engine idling.
Pistons: - Own, Lo-Ex silicon-aluminum alloy, T slot, cam ground type. Use finished replacement pistons when reconditioning engine.
Weight - 10.88 ozs. stripped, 12.99 ozs. with rings and pin.
LIGHTING (Cont’d)

Length - 3 3/16”.
Removal - Pistons and rods removed from above.
Clearance - Top .016”. Bottom .002”.

Fitting New Pistons - Use feeler gauge .0015-.002” thick to check clearance. It should be possible to withdraw feeler from between piston and cylinder wall on side opposite slot when grasped between thumb and forefinger with 3-4 lbs. pull.

Installing Pistons - Slot should be to left or away from valves.

Piston Rings: - Four rings per piston, two compression rings, one oil control ring above pin, one oil control ring below pin. Lower ring groove drilled radially with oil drain holes.

1935 Piston Rings

<table>
<thead>
<tr>
<th>Ring Comp.</th>
<th>End Gap</th>
<th>Wall Thickness</th>

<tr>
<td>.187</td>
<td>.006-.016”.</td>
<td>.128”</td>
</tr>
</tbody>
</table>

NOTE - Use standard or oversize rings of size indicated for replacement pistons (see Replacement Piston section above); 3.000” - B, D, F, 3.003” - J; 3.005” - L; 3.010” - BO, DO, FO; 3.015” - LO; 3.020” - BB, DD, FF. If rings filed, clearance at pin must be kept uniform with end gap.

Pin Fit in Piston: - Snug fit with piston at 200°F.

Clearance in Rod Bushing: -.0003”.

Connecting Rod - Weight 28.96 ozs. Length 8 3/16”.

Crankpin Journal Diameter – 1-15/16”.

Lower Bearing - Spun babbit-lined type.

Clearance -.001”, Side play .006-.010”.

Adjustment - Shims (laminated type). Do not file caps.

Installing Rods - Connecting rod lower bearings are offset. Install rods with right hand offset (widest half of bearing toward rear) in cylinders #1, 3, 5, 7 and rods with left hand offset (widest half of bearing toward front) in cylinders #2, 4, 6, 8.

Crankshaft: - Five bearings. Eight counterweights.

Journal Diameters - #1, 2-9/32”; #2, 2-5/16”; #3, 2-11/32”; #4, 2-5/8”; #5, 2-13/32”.

Bearing Type - Removable bronze-backed, babbit-lined.

Clearance -.001”.

Adjustment - Laminated shims. Do not file caps.

End Thrust - Taken by #3 (center) bearing. Endplay .006-.012”.

NOTE:1941 Type Timing Gear Set can be installed on these models (tooth angle redesigned to provide quieter operation.

End Thrust – taken by spring-loaded plunger in camshaft gear and thrust plate on gear cover.

Camshaft Setting – Gears are marked. Mesh marked tooth on crankshaft gear between two marked teeth on camshaft gear.

Valve Timing

Tappet Clearance: -.006” Int., .008” Exh., engine hot.

Valve Timing - See Camshaft Setting (above)

Intake Valves - Open 10°40’ BTDC. Close 60° ALDC.

Exh. Valves - Open 50° BLDC. Close 18°44’ ATDC.

To Check Valve Timing - Set tappet clearance #1 intake valve at .010”. This valve should open with piston 10°40’ or .0494” before top dead center when a point on the flywheel approximately 3.97 teeth before the dead center mark ‘UDC.1-8’ lines up with the pointer on the housing. No flywheel mark provided.
LUBRICATION

Lubrication: - Duo-flow (splash) system with positive pump feed to oil troughs and timing gears. Oscillating plunger type oil pump mounted on right side of crankcase.

Normal Oil Pressure - 3 lbs.

Oil Pressure Relief Valve - Operates at 3 lbs. Located on right hand side of crankcase at rear (combined with oil pressure signal light switch).

Capacity and Oil - 7 qts. (refill), 9 qts. (dry). Use SAE. #30 (above 40ºF.), #20-W (40º to 0ºF.), #10-W (0º to -15ºF.).

CLUTCH

CLUTCH: - Own make. Single plate type operating in oil. No adjustment for wear required.

Clutch Pedal Adjustment - Free movement of clutch pedal must be 1½". To adjust, loosen lock nut on clutch pedal connecting link, remove clevis pin at lower end of link, turn clevis until free movement of pedal is 1½", replace pin and tighten lock nut. See adjustment for Automatic Clutch linkage below.

Automatic Clutch Control - On cars with Automatic Clutch, check control linkage whenever clutch pedal is adjusted. Depress accelerator pedal, pull back on clutch control unit cable (left side of engine), check clearance between back of slot in cable yoke and clevis pin which attaches it to operating lever. This clearance should be 7/8".

Clutch Lubrication - Oil in clutch should be drained and replaced at 5000-15000 mile intervals. To drain oil, turn flywheel until filler plug is visible in inspection hole (left hand front face of flywheel above starter), remove plug, turn flywheel until star stamped on flywheel is visible in inspection hole, allow at least 1 minute in this position for draining, turn flywheel until filler plug hole is visible, insert 1/3 pint Hudsonite Clutch Compound, replace filler plug.

Clutch Facings - Driven plate is 6-3/8" I.D., 9¾' O.D., .203" thick. Facing consists of 108 cork inserts mounted on driven plate.

FRONT SUSPENSION

Front Suspension: Consists of conventional "I" beam section front axle with Elliott type ends and semi-elliptic springs, or Axle-flex articulated axle. Data and adjustments for both types are the same.

Kingpin Inclination - 7º crosswise.

Caster - 4-4½º. Adjust by inserting wedge shims between springs and spring pad on axle.

Camber - 1-1½º. No adjustment. Axle may be bent cold to correct camber.

Toe In - 1/8" measured 10" above ground. Adjust by loosening tie rod end clamp bolts and rotating tie rod in direction that wheels revolve to increase toe-in, or in opposite direction to decrease toe-in.

NOTE - End thrust on kingpin is taken by five ball bearings in plug above kingpin. Bearing lower race is machined directly in kingpin end.

STEERING GEAR

Steering Gear: - Gemmer Worm-and-Sector type. See Steering Gear Section for complete data.

BRAKES

BRAKES: Service-Bendix mechanical, Duo-Servo, Single anchor type. Hand lever applies all service brakes.

MISC. MECHANICAL

AUTOMATIC SHIFT: (ELECTRIC HAND): - Bendix electro-pneumatic type optional on Models HT, HU, standard on Model HHU.
