NOTE: - 'Electric Hand' Bendix electro-pneumatic type gear shift optional on all models.

COMPRESSION: - Ratio 6.25-1 Standard cast-iron head, 7.0-1 Optional high compression aluminum head. Check compression pressure by removing all spark plugs and cranking engine with throttle wide open.

<table>

</table>

VACUUM READING - Gauge should show steady reading of 18-20" of H.G. with engine idling at 350 R.P.M.

IGNITION: - Coil Model IG-4633. Resistor unit mounted on distributor terminal is connected in series with coil primary.
- Coil Draw - 2.5 amperes idling, 4.5 stopped.
- Ignition Switch - Mitchelllock Model 24-B, Type 6696. Connected to coil by armored cable.
- Ignition Lock - Briggs & Stratton No. 50184, Mitchell No. 6095.

DISTRIBUTOR
Distributor Model IGB-4301B. Single breaker, 6 lobe cam, full automatic advance type.

Automatic Advance

</tbody>
</table>

Breaker Gap - Set at .020". Limits .018-.020".
Cam Angle or Dwell - 40° (closed), 20° (open).
Breaker Arm Spring Tension - 16-20 ounces.

Condenser - Part No. IGB-1025J. Capacity .20-.25 mfd.

Distributor Removal: - Mounted on right side of crankcase. To remove, take out hold-down screw in advance arm.

IGNITION TIMING

Ignition Timing: - Initial setting for all engines as shown. See Final Setting section for adjustment in accordance with octane rating of fuel used.

<table>
<thead>
<tr>
<th>Flywheel Degrees</th>
<th>Piston Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>At TDC</td>
<td>.000&quot; TDC</td>
</tr>
</tbody>
</table>

NOTE - High octane type fuel must be used in engines with high compression 7.0-1 aluminum head.
To Set Timing (Initial Setting) - With #1 piston on compression, turn engine over until flywheel mark 'UDC.1-6/' lines up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clockwise until contacts begin to open, tighten hold-down screw.

Final Setting - Check ignition setting by road testing car. With engine warm and running in high gear on level road, a slight spark knock should be evident when car is accelerated from 10-15 M.P.H. with wide open throttle. Adjust by loosening hold-down screw in advance arm and rotating distributor one graduation on scale counter-clockwise (if no knock evident) or clockwise (if knock too severe). Repeat test until slight knock is evident. Final setting must not be more than 3/4" on flywheel before 'UDC.1-6/' mark.
Firing Order: - 1-5-3-6-2-4. See diagram.
Spark Plug Gaps - .025" (Standard engine), .022" (Optional H.C. engine).
CARBURETION

Carburetor - Carter Model 329-S, 1-1/4" downdraft type.

NOTE - Do not adjust carburetor until engine is warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

Idle Adjustment - Adjust throttle stopscrew so that speed is 350 R.P.M. or 7 M.P.H. Turn idle adjusting screw in until engine begins to miss, then turn screw out until engine begins to roll, finally turn screw in slowly until engine fires smoothly. Final setting should be 1/2-1 turn open from seated position. Readjust throttle stopscrew for correct idling speed.

Accelerating pump Setting - Pump lever (under dust cover at top of carburetor) has three holes for pump link engagement. Change for seasonal requirements as follows:

Center Hole - Normal summer temperatures.
Inner Hole (Min. stroke) - Extreme hot weather.
Upper Hole (Max. stroke) - Extreme cold weather.
Fast Idle: - Integral with carburetor. No adjustment required.
Automatic Choke: - Carter Climatic Control.
Air Cleaner: - AC. #1526650 Standard #1526651 on cars with Electric Hand. Heavy duty oil-bath type optional.
Fuel Pump: - AC. Type R #1521450. Diaphragm type.
Gasoline Gauge: - King-Seeley Electric.

VALVE TIMING

Tappet Clearance - .006" intake, .008" exhaust, with engine hot.
Valve Timing (Cont'd)

Valve Spring Pressure - 44 lbs. at 2" (valve closed), 102 lbs. at 1-21/32" (valve open).

To Check Valve Timing - Set tappet clearance #1 intake valve at .010". This valve should open with piston 10° 40' or .0562" before top dead center when point on flywheel approximately 3.94 teeth before dead center mark 'UDC.1-6/' lines up with pointer in inspection hole in left front face of housing. Reset tappet clearance at .006" with engine hot.

**LUBRICATION**

Crankcase Capacity - 5 qts. refill.
Normal Oil Pressure - 3 lbs. (no gauge).
Oil Pressure Signal Light - Used instead of pressure gauge. Controlled by oil pressure regulator valve.

**BATTERY**

National. Type ST-317X. 6 volt, 17 plate, 96 ampere hour (20 hour rate).
starting Capacity - 120 amperes for 20 minutes.
Zero Capacity - 300 amperes for 3.2 minutes.
Grounded Terminal - Positive (+) terminal.
Location - On left hand side under front floor board.

**STARTER**

Model MAB-4075. Armature MAB-2113.
Drive - Inboard Bendix, Type A-1673.
Cranking Engine - 150 R.P.M. 120-125 amps. at 5 volts.
Rotation - Counter-clockwise at commutator end.
Brush Spring Tension - 42-53 ounces (new brushes).

</table>

**Solenoid Switch**

Closes with terminal voltage of 4 volts or less and will remain closed until voltage drops to .75-2.0 volts. Current draw 3 amperes at 6 volts.

**GENERATOR**

Model GAR-4701-6. Armature GAR2077. Third brush control in conjunction with Current Regulator (two-rate charging control). Ventilated by fan on drive pulley.

Charging Rate Adjustment - Use test meters to check generator output. Short out current regulator by connecting jumper wire from 'F' terminal on generator to ground. Take off commutator cover band, shift third brush by hand counter- clockwise to increase or clockwise to decrease charging rate until output is 22.8 amperes at 8.0 volts with generator at room temperature. Third brush held in position by friction. Remove jumper.

Maximum Charging Rate - As given above. Do not exceed.

Rotation - Counter-clockwise at commutator end.
Field Current - 3.51-3.89 amperes at 6.0 volts.
Motoring Current - 5.32-5.88 amperes at 6 volts.
Field Fuse - 5 amperes in knurled cup on side of regulator case.

Removal: - Pivot mounted at left front of engine with fan belt drive. To remove, take out two pivot bolts, one clamp bolt.
Belt Adjustment: - Swing generator away from engine until slack on belt midway between fan pulley and generator pulley is 1-1/4" (measure from straightedge across pulleys).

**RELAY-REGULATOR**

Model TC-4304A. Mounted on engine side of dash. Consists of Cutout Relay and Current Regulator (two-rate charging control). Cutout Relay has extra set of ground contacts for generator charging tell-tale signal light control.
Cutout Relay
Cuts In - 6.5-7.25 volts. 8 M.P.H.
Cuts Out - .5-2.5 ampere discharge current.
Contact Gap - .015-.045" (with upper or ground contacts closed-ground contacts must be open with main contacts closed).
Air Gap - .010-.030" with contacts closed.

Current Regulator
Contacts Open - 8.0-8.50 volts at 70º F.
Contacts Close - 1.2-1.4 volts below opening point.
Contact Gap - .005" minimum.
Air Gap - .045" with contacts closed.

LIGHTING
Headlamps - Hall, Pre-focused type. Head lamps aimed straight ahead (upper beam with lenses in place).
Upper and lower beams controlled by foot selector switch.
Headlamp Beam Indicator - In lower portion of speedometer dial. Lighted when upper beams in use.

Switches
Lighting - R.B.M. Model 1650.
Foot Selector - R.B.M. Model 1082.
Instrument Lights - Soreng-Manegold Model K2060A.
Stop Light - Motometer Model 58012-C hydraulic type mounted in brake line on left frame side rail in channel at rear.

NOTE - High octane type fuel must be used in engines with high compression 7.0-1 aluminum head.

To Set Timing (Initial Setting) - With #1 piston on compression turn engine over until flywheel mark 'UDC 1-8/' lines up with pointer in inspection hole in left front face of flywheel housing above starter. Loosen hold-down screw in advance arm, rotate distributor clockwise to limit of advance arm slot, then slowly rotate distributor counter-clockwise until contacts begin to open. Tighten hold-down screw.

Final Setting - Check ignition setting by road testing car. With engine warm and running in high gear on level road, a slight spark knock should be evident when car is accelerated from 10-15 M.P.H. with wide open throttle. Adjust by loosening hold- down screw in advance arm and rotating distributor one graduation on scale counterclockwise (if too severe). Repeat test until slight knock is evident. Final setting must not be more than 3/4" on flywheel before 'UDC 1-8/' mark.

Firing Order - 1-6-2-5-8-3-7-4. See diagram.

Spark Plugs - Champion Type J-8. (Standard 6.0-1 engines), J-9 (Optional 7.0-1 engines). 14 MM. Metric type,
Spark Plug Gaps - .025" (Standard engine), .022" (Optional H.C. engine).

CARBURETOR

CARBURETION: - Carburetor - Carter Model 330-S 1-1/4" downdraft type.
NOTE: - Do not adjust carburetor until engine warmed up so that choke valve is wide open and engine idling at slow or hot idling speed.

Idle Adjustment - Adjust throttle stop screw so that choke valve is wide open and engine idling at slow or hot idling speed.

Accelerating Pump Setting - Pump lever (under dust cover at top of carburetor) has three holes for pump link
Carburetor (Cont'd)

engagement. Change for seasonal requirements as follows:

**Center Hole** - Normal summer temperatures.
**Inner Hole (Min. stroke)** - Extreme hot weather.
**Upper Hole (Max. stroke)** - Extreme cold weather.
**Fast Idle** - Integral with carburetor. No adjustment required.

**Automatic Choke** - Carter Climatic Control.
**Air Cleaner** - AC. #1526650 Standard # 1526651 on cars with Electric Hand. Heavy duty oil-bath type optional.
**Fuel Pump** - AC. Type R #1521450. Diaphragm type.
**Gasoline Gauge** - King-Seeley Electric.

---

**VALVE TIMING**

**VALVE TIMING:**

- To Check Timing-Set tappet clearance #1 intake valve at .010". This valve should open with piston 10° 40’ or .0494" before top dead center when a point on flywheel approximately 3.94 teeth before the dead center mark "UDC.1-8/' lines up with pointer in inspection hole in left front face of housing. Reset tappet clearance at .0061, with engine hot.

- **Tappet Clearance** - .006" Intake, .008"Exhaust, hot.
- **Valve Spring Pressure** - 44 lbs. at 2" (valve closed), 102 lbs. at 1-21/32" (valve open).
LUBRICATION

Crankcase Capacity - 7 quarts (refill).
Normal Oil Pressure - 3 lbs. (no gauge).
Oil Pressure Signal Light - Used instead of pressure gauge. Controlled by oil pressure regulator valve.

BATTERY

National, Type ST-319X. 6 volt, 19 plate, 108 ampere hour (20 hour rate).
Starting Capacity - 135 amperes for 20 minutes.
Zero Capacity - 300 amperes for 4.3 minutes.
Grounded Terminal - Positive (+) terminal.
Location - On left hand side under front floor boards.

STARTER

Cranking Engine - 150 R.P.M. 120-125 amps, at 5 v.
Rotation - Counter-clockwise at commutator end.
Brush Spring Tension - 42-53 ounces (new brushes).
